

MOHAMMED RIYAZ

Full Stack Developer - ReactJS | Java | Spring Boot | ASP.NET Core
Phone: +91 9611512767 | Email: riyazkarnad5@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Software Engineer with experience building enterprise web applications using ReactJS, Java, Spring Boot, and ASP.NET Core Web API. Skilled in REST API development, database management, backend development, frontend development, and layered software architecture. Currently developing banking software for an Australian financial services client.

CORE SKILLS

Java, Spring Boot, Spring Data JPA, Hibernate ORM, ReactJS, JavaScript, C#, ASP.NET Core, Entity Framework Core, Node.js, HTML5, CSS, REST API Design, Microservices, MySQL, PostgreSQL, Amazon Web Services (AWS), Docker, Git, GitHub, Postman, Bruno, Agile/Scrum, JIRA, Confluence, Object-Oriented Programming (OOP), Data Structures and Algorithms, CI/CD, Unit Testing, Software Development Life Cycle (SDLC)

EXPERIENCE

Assistant System Engineer - Tata Consultancy Services (TCS), Bangalore, India *June 2025 - Present*

- Delivered Java Spring Boot REST API features for an enterprise banking platform serving a leading Australian bank, improving feature delivery efficiency through backend optimization and reusable service components.
- Built 3+ production backend endpoints in Java Spring Boot, enforcing strict HTTP conventions and input validation to ensure reliable, secure data handling.
- Implemented Hibernate ORM and Spring Data JPA for efficient data access, entity modeling, and transaction management within backend banking services.
- Introduced a Controller-Service-Repository architecture in Spring Boot with Hibernate ORM and centralized exception handling, cutting bug resolution time by 25% and improving code readability team-wide.
- Led the migration and modernization of a legacy backend application to a current framework version, improving long-term maintainability — recognized with client appreciation for the effort.
- Set up Docker containerization for a legacy backend service, streamlining local environment setup and enabling consistent builds across the team.
- Collaborated in an Agile team — managing Git source control, driving code reviews, and supporting QA across sprint cycles.

Full Stack Web Developer Intern - Swizosoft, Mangaluru, India *Feb 2024 - Mar 2024*

- Built responsive React web apps with consistent rendering across desktop and mobile devices.
- Cut codebase size by 25% through logic restructuring and component extraction, reducing onboarding time for new developers.
- Diagnosed and resolved production bugs, shipping hotfixes that improved application reliability.

EDUCATION

B.E. in Computer Science and Engineering - Sahyadri College of Engineering and Management | 2020 - 2024 | CGPA: 8.65

PROJECTS

Code for all projects: github.com/MOHAMMED-RIYAZ

Enterprise Service Request Management System (ESRMS) - Spring Boot, Spring Data JPA, Hibernate, MySQL, REST API

- Architected a scalable backend application using Spring Boot, following microservices architecture for modular and maintainable code.
- Designed and developed RESTful APIs to manage the complete service request lifecycle, including creation, assignment, status tracking, approval workflows, and resolution.
- Implemented Spring Data JPA and Hibernate ORM for efficient database access, entity relationships, and transaction management with MySQL.
- Applied DTOs, request validation, centralized exception handling, and global error responses to improve API reliability and maintainability.
- Optimized relational database design with normalized schemas, foreign key constraints, and indexed queries for efficient data retrieval.
- Tested and documented APIs using Postman and Swagger/OpenAPI, ensuring reliable endpoint validation.

E-Commerce Application - React, Node.js, Express.js, MySQL, JWT, REST API

- Developed a scalable full-stack e-commerce application using React, Node.js, Express.js, and MySQL.
- Designed RESTful APIs for product catalog, shopping cart, order management, and user profile operations.
- Implemented JWT-based authentication and Role-Based Access Control (RBAC) to secure protected APIs and user-specific resources.
- Designed normalized database schemas with optimized relationships for products, orders, users, and transactions.
- Improved application maintainability through reusable React components, modular backend architecture, and structured API responses.
- Performed API testing and debugging using Postman, ensuring reliable request handling and validation.
